

JORDAN SCOTT

Software Engineer SUMMARY

Address: Brooklyn, NY 11221

Phone: 917-618-0235

Email: jescott2398@gmail.com

Software engineer with 4+ years of experience designing, deploying, and operating production systems in enterprise and financial services environments. Strong background in Python-based backend development, API design, and data processing pipelines that support complex, high-throughput workflows. Experienced building and maintaining cloud-native infrastructure, CI/CD pipelines, and containerized services with a focus on reliability, performance, and security at scale. Comfortable working across the stack to support user-facing applications, collaborating closely with product, design, and QA to translate ambiguous requirements into maintainable, production-ready systems. Adept at automating workflows, improving observability, and optimizing system performance, with a growing focus on AI-enabled platforms, service integrations, and data-driven tooling that empower teams to build, iterate, and ship with confidence.

SKILLS

Technical Skills: Python, C++, React, Git, SQL, AWS, CI/CD, Rest APIs, Active Directory, JavaScript, Flask, Docker, Linux (creating & managing multi-distro/server environments), Testing & QA, Agile/Scrum, Scripting (Bash, VBA), System Engineering **Certifications:** PCEP – Certified Entry-Level Python Programmer (Issued: Dec 2022)

WORK EXPERIENCE

Continental Stock Transfer and Trust - Technical Specialist, New York, NY

Sep 2022 - Present

- Designed, deployed, and maintained scalable platform infrastructure to support critical business and operational workflows, ensuring reliability, performance, and availability across systems.
- Built and operated automated data pipelines and internal tooling using Python, Docker, and AWS, improving observability, efficiency, and maintainability of production systems.
- Led the end-to-end design, implementation, and ongoing operation of an internal DRS invoicing platform, generating over \$4M in net revenue within its first year, translating complex business rules into automated, auditable system logic.
- Collaborated closely with product, finance, and operations teams to define requirements, implement solutions, and deliver high-quality systems that support evolving workflows.
- Modernized legacy applications by migrating to Python-based services, improving scalability, maintainability, and deployment efficiency.
- Developed monitoring, reporting, and automated validation workflows to service system issues proactively, reducing downtime and ensuring reliability for end users.
- Served as a primary point of escalation for complex technical issues, troubleshooting production systems and implementing solutions that prevent recurrence.
- Documented system architecture, workflows, and dependencies to support knowledge transfer, auditability, and long-term platform sustainability.

OpenCrowd - QA Engineer, New York, NY

June 2021 - May 2022

- Designed and executed test plans, test cases, and regression suites for enterprise financial and cybersecurity applications.
- Built automated test frameworks using Pytest and Selenium, increasing test coverage and reducing manual testing time.
- Conducted API testing for microservices and REST endpoints using Postman and Python scripts.
- Partnered with developers to identify, reproduce, and resolve defects in React dashboards and Flask-based services.
- Performed load, stress, and integration testing to validate cloud scalability on AWS.
- Contributed to sprint planning, QA documentation, and release readiness sign-offs in Agile environments.

Iterative Capital - Junior Developer, New York, NY

May 2019 - April 2021

- Supported engineering team in building a high-frequency OTC cryptocurrency trading platform.
- Developed and maintained Flask APIs and integrated Coinbase order books for real-time crypto data processing.
- Contributed to the deployment of a secure authentication and authorization system via AWS.

EDUCATION

Worcester Polytechnic Institute, Computer Science
