

JORDAN SCOTT

Systems Engineer

Address: Brooklyn, NY 11221

Phone: 917-618-0235

Email: jescott2398@gmail.com

SUMMARY

Systems and enterprise engineer with 5+ years of experience designing, integrating, and operating productivity and identity platforms in enterprise and financial environments. Strong Python developer who codes regularly to build internal tools, automate workflows, and integrate SaaS and cloud platforms through APIs. Experienced managing SSO, SCIM-based provisioning, and access policies across distributed systems, with a focus on reliability, usability, and minimizing operational toil. Comfortable owning complex cross-functional projects end-to-end, designing bespoke solutions, connecting third-party and in-house systems, and tuning services to support high-performance teams. Brings strong debugging and systems design skills, a command-line fluency in Linux environments, and a bias toward automation that enables "it already happened" service delivery at scale.

SKILLS

Technical Skills: Python, C++, React, Git, SQL, AWS, CI/CD, Rest APIs, Active Directory, JavaScript, Flask, Docker, Linux (creating & managing multi-distro/server environments), Jamf, Carbon Black, Scripting (Bash, VBA), System Engineering **Certifications:** PCEP – Certified Entry-Level Python Programmer (Issued: Dec 2022)

WORK EXPERIENCE

Sep 2022 - Present

Continental Stock Transfer and Trust - Technical Specialist, New York, NY

- Designed, deployed, and maintained scalable platform infrastructure to support critical business and operational workflows, ensuring reliability, performance, and availability across systems.
- Built and operated automated data pipelines and internal tooling using Python, Docker, and AWS, improving observability, efficiency, and maintainability of production systems.
- Led the end-to-end design, implementation, and ongoing operation of an internal DRS invoicing platform, generating over \$4M in net revenue within its first year, translating complex business rules into automated, auditable system logic.
- Collaborated closely with product, finance, and operations teams to define requirements, implement solutions, and deliver high-quality systems that support evolving workflows.
- Modernized legacy applications by migrating to Python-based services, improving scalability, maintainability, and deployment efficiency.
- Developed monitoring, reporting, and automated validation workflows to service system issues proactively, reducing downtime and ensuring reliability for end users.
- Served as a primary point of escalation for complex technical issues, troubleshooting production systems and implementing solutions that prevent recurrence.
- Documented system architecture, workflows, and dependencies to support knowledge transfer, auditability, and long-term platform sustainability.

June 2021 - May 2022

OpenCrowd - QA Engineer, New York, NY

- Designed and executed test plans, test cases, and regression suites for enterprise financial and cybersecurity applications.
- Built automated test frameworks using Pytest and Selenium, increasing test coverage and reducing manual testing time.
- Conducted API testing for microservices and REST endpoints using Postman and Python scripts.
- Partnered with developers to identify, reproduce, and resolve defects in React dashboards and Flask-based services.
- Performed load, stress, and integration testing to validate cloud scalability on AWS.
- Contributed to sprint planning, QA documentation, and release readiness sign-offs in Agile environments.

Iterative Capital - Junior Developer, New York, NY

May 2019 - April 2021

- Supported engineering team in building a high-frequency OTC cryptocurrency trading platform.
- Developed and maintained Flask APIs and integrated Coinbase order books for real-time crypto data processing.
- Contributed to the deployment of a secure authentication and authorization system via AWS.

EDUCATION

Worcester Polytechnic Institute, Computer Science
