Hiring Manager

GXO Logistics Corporate Services Inc.

I am applying for the Manager, Technology Client Support position at GXO Logistics. With a background in systems engineering, software development, and enterprise IT operations, I bring the technical expertise, project management skills, and customer-facing experience needed to support complex system implementations, optimize warehouse management solutions, and deliver measurable ROI for internal and external clients.

At Continental Stock Transfer and Trust, I serve as both a systems engineer and technical project lead. I have managed system migrations, designed automation pipelines in Python and AWS, and created dashboards to monitor business-critical data flows. These projects required full lifecycle ownership—solution design, implementation, and post-production support—along with direct collaboration with stakeholders to ensure adoption and success.

My technical foundation includes advanced SQL query design, troubleshooting of system integrations, and incident management using tools such as Jira Service Desk and ServiceNow, I've used both and even led a migration away from Service now to fall in line with Continentals Atlassian suite. I have worked extensively with data pipelines, designing integrations across APIs and flat-file systems to ensure reliability and compliance in financial services environments. In addition, I have authored detailed technical and functional documentation to guide system modifications and long-term support—mirroring GXO's need for functional design and implementation plan documentation.

I am experienced in performing root cause analysis for system-level issues, mapping integrations using XML and JSON, and building test cases to validate multi-layer integrations. Just as importantly, I bring the ability to translate technical challenges into clear solutions for both technical teams and business stakeholders. My cross-functional approach ensures that technology projects not only meet technical requirements but also align with business goals and customer outcomes.

I am enthusiastic about the opportunity to contribute to GXO's continued success by leading technology support initiatives, managing implementations, and strengthening client relationships. I look forward to discussing how my background in IT systems engineering and customer support management can support GXO's operations.

Thank you for your attention. I look forward to the opportunity to speak further.

Best Regards,

Jordan Scott
