JPMorgan Chase & Co.

Dear Hiring Manager,

I am applying for the Senior Systems Engineer position within the EP CCC space. My background spans enterprise IT operations, systems engineering, and software development, with direct experience supporting financial environments that require high availability, compliance, and secure integrations.

In my current role at Continental Stock Transfer and Trust, I maintain and administer Wintel servers, on-prem Active Directory, and legacy recordkeeping platforms while building data pipelines and internal tools using Python, Docker, and AWS. I designed and implemented a DRS invoicing system in Python and VBA, automated reporting dashboards for transmission monitoring, and led migrations of legacy applications into Flask and React architectures. These initiatives improved operational visibility, reduced downtime during system transitions, and strengthened compliance enforcement.

Earlier, as a QA Engineer at OpenCrowd, I built Pytest and Selenium frameworks to automate regression testing across financial and cybersecurity applications, integrated API-level validation of REST services, and performed load testing in AWS. As a Junior Developer at Iterative Capital, I developed Flask APIs for real-time data ingestion, integrated Coinbase order books into our trading platform, and supported secure authentication deployments. These roles deepened my ability to analyze system performance, identify vulnerabilities, and ensure production services remain reliable under stress.

These positions' focus on operational stability, metadata analysis, and compliance aligns with my skill set. I have designed automated processes for ingesting and analyzing structured data, enforced security policies through AD GPO management, and reported on compliance metrics at the enterprise level. I am confident in my ability to oversee integration across applications, manage SQL and Oracle environments, and lead continuous improvement initiatives to enhance system resilience and performance.

I look forward to the opportunity to discuss how my technical background and cross-functional experience can contribute to the firm's operational stability objectives.

Sincerely,

Jordan Scott
