Hiring Manager
Pure Storage

I am applying for the Corporate Pre-Sales Systems Engineer position. With a background spanning systems engineering, enterprise IT support, and software development, I bring both the technical depth and customer-facing communication skills needed to support sales growth and position Pure solutions as the optimal choice in modern storage environments.

At Continental Stock Transfer and Trust, I manage enterprise infrastructure while developing internal tools and data pipelines in Python, Docker, and AWS. My responsibilities include administering Active Directory, maintaining Linux environments, and migrating legacy platforms to modern frameworks. These efforts have strengthened compliance, improved system reliability, and enabled secure integrations across critical financial applications.

In earlier roles as a QA Engineer at OpenCrowd and a Junior Developer at Iterative Capital, I worked directly with distributed systems and data-intensive applications, testing scalability on AWS, validating REST services, and developing APIs to integrate with high-frequency trading platforms. This experience reinforced my expertise in troubleshooting complex environments, presenting technical findings to stakeholders, and ensuring that solutions met both performance and business requirements.

I have strong knowledge of NAS, SAN, and distributed storage concepts, complemented by hands-on work across Windows, Linux, VMware, LeoStream, and cloud environments. I am experienced in leading product demonstrations, building dashboards and reporting tools, and explaining technical solutions to both technical and non-technical audiences. My ability to blend technical depth with clear communication aligns with the trusted advisor role you require in pre-sales.

I am excited by the opportunity to help customers understand and adopt Pure's storage solutions, while contributing to a team focused on reshaping the data storage industry. I look forward to the chance to discuss how my technical background and customer-focused approach can support your sales and growth objectives.

Thank you for your attention. I look forward to the opportunity to speak further.

Best Regards,

Jordan Scott
