**Hiring Manager
Scale AI**

I am applying for the Solutions Engineer position. With a background spanning systems engineering, software development, and enterprise IT, I bring the technical depth, customer-facing experience, and solution-oriented mindset needed to drive technical wins and help enterprise customers adopt advanced AI applications at scale.

At Continental Stock Transfer and Trust, I bridge IT operations and engineering by managing enterprise infrastructure while also building internal platforms and data pipelines in Python, Docker, and AWS. I led migrations from legacy systems to modern Flask and React applications, automated compliance reporting, and implemented data ingestion workflows that improved both security and performance. These projects required engaging stakeholders, defining requirements, and delivering reliable solutions that aligned with business goals—mirroring the customer-facing problem-solving required in pre-sales engineering.

Previously, as a QA Engineer at OpenCrowd, I built automated test frameworks for financial and cybersecurity platforms, validated REST APIs, and ensured distributed systems scaled reliably on AWS. Earlier at Iterative Capital, I contributed to the development of a high-frequency trading platform by building Flask APIs, integrating real-time data pipelines, and implementing secure authentication services. These roles strengthened my technical credibility in fast-paced environments where customer trust and system reliability were critical.

I am fluent in Python and have hands-on experience with enterprise SaaS integrations, data pipelines, and compliance-driven financial environments. My ability to engage with both executives and engineers, translate technical requirements into actionable scopes of work, and deliver tailored demonstrations positions me well to secure technical wins for Scale's customers. I am also deeply interested in generative AI and its enterprise applications, and I am motivated to apply my background in system design and automation to accelerate customer adoption of Scale's solutions.

I look forward to the opportunity to discuss how my technical expertise, customer-facing experience, and curiosity about AI applications can support Scale's mission to drive adoption and deliver value to enterprise customers.

Thank you for your attention. I look forward to the opportunity to speak further.

Best Regards,

Jordan Scott
