**Hiring Manager
Anthropic**

I am excited to apply for the Incentive Compensation Systems Engineer position. With a strong background in designing, implementing, and maintaining business-critical platforms, I bring experience translating complex operational and financial requirements into scalable, auditable, and reliable systems. I am particularly drawn to this role's combination of technical ownership and cross-functional collaboration, partnering closely with Revenue Operations, Finance, Data Engineering, and HR to ensure compensation programs operate accurately and efficiently at scale.

In my current role, I lead the end-to-end design, implementation, and administration of an internal DRS invoicing platform, built with zero external financial overhead and generating over \$4M in net revenue in its first year. This project required translating detailed business rules into system logic, automating calculation workflows, building robust data integrations, and collaborating with finance, operations, and leadership teams to validate outputs and ensure long-term maintainability. I also built monitoring and reporting dashboards that proactively surface data and system issues, reducing manual intervention and improving operational efficiency.

Beyond this platform, I have designed and maintained Python- and Docker-based data pipelines, modernized legacy applications, and implemented workflows that improve reliability, auditability, and performance across business-critical systems. I am confident that my experience with system configuration, automation, data integrity, and cross-functional problem solving will allow me to contribute immediately to the successful operation and evolution of your ICM platform.

I am enthusiastic about the opportunity to help Anthropic optimize incentive compensation programs and enable accurate, efficient workflows that directly support business performance. I would welcome the chance to discuss how my experience and approach to platform engineering can support your team and its mission.

Thank you for your time and consideration.

Best Regards,

Jordan Scott
