**Hiring Manager
Cinder**

I am applying for Forward Deployed Engineer role at Cinder. My background spans software engineering, systems operations, and enterprise IT, with a consistent focus on embedding directly with stakeholders to solve complex, high-impact problems through practical technical solutions.

In my current role, I operate at the intersection of engineering, operations, and business teams—serving as both a technical implementer and a trusted advisor. I have designed and delivered production systems by working closely with non-technical and technical partners to diagnose root causes, implement last-mile integrations, and drive adoption of new tooling under real-world constraints. This includes building and maintaining data pipelines, modernizing legacy platforms, and supporting mission-critical systems where reliability, auditability, and trust are paramount.

A representative example of this approach was leading the end-to-end design, implementation, and maintenance of an internal DRS invoicing platform. Built with zero internal financial overhead, the system generated over \$4M in net revenue within its first year and directly contributed to the company's bottom line. Delivering this outcome required close collaboration with finance, operations, and leadership teams, rapid iteration on ambiguous requirements, and a strong focus on usability, compliance, and long-term maintainability—an execution model that closely mirrors Cinder's forward-deployed engagement style.

Beyond development, I have routinely acted as a point of escalation for complex issues, improved change management and visibility across teams, and built monitoring and reporting workflows to proactively surface operational risks. I am comfortable translating customer needs into technical execution, partnering with product and engineering teams to close gaps, and ensuring solutions deliver measurable, lasting impact. Cinder's mission to improve internet safety through deeply embedded technical partnerships strongly resonates with my experience and interests. I am excited by the opportunity to work directly with customers, help them unlock the full value of Cinder's platform, and contribute to the growth of both the Engineering and Customer Success organizations.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background and approach could support Cinder's customers and mission.

Best Regards,

Jordan Scott
