**Hiring Manager
Galaxy Digital**

I am writing to apply for the IT Support role at Galaxy Digital. I'm drawn to the opportunity to contribute to a fast-paced, high-performance environment at the intersection of finance and technology, where reliable internal systems directly enable business performance.

My background includes hands-on support and systems engineering experience within enterprise and financial services environments. I have worked across Unix and Windows systems, SaaS administration, device provisioning, MDM management, and user lifecycle management, supporting employees in environments where uptime, responsiveness, and professionalism matter. I am comfortable providing deside and remote support, including executive-facing environments, and I take pride in delivering clear communication and dependable follow-through.

Beyond day-to-day support, I consistently look for ways to improve operational efficiency. I have experience using Python, Bash, and PowerShell to automate repetitive workflows, developing and maintaining streamlined onboarding and access management processes to reduce manual effort. I view IT not only as user support, but as a foundation for scalable infrastructure, security, and operational excellence.

I am motivated by environments where expectations are high and ownership is valued. Galaxy's focus on building at the intersection of digital assets, infrastructure, and performance aligns with how I approach my work: proactive, detail-oriented, and driven to continuously improve systems and user experience. I would welcome the opportunity to contribute to your Corporate Technology team and support the broader mission of enabling innovation at scale.

Thank you for your consideration.

Best Regards,

Jordan Scott
