Hiring Manager

Hudson River Trading

I am excited to apply for the Enterprise Engineering role at Hudson River Trading. The opportunity to help design, integrate, and optimize core productivity platforms for a globally distributed team aligns closely with my experience and interests in systems engineering, automation, and internal tooling.

In my previous roles, I have supported enterprise environments with a focus on Python-based automation, SaaS integrations, and identity management. I have built internal tools and workflows that reduce operational toil, streamline onboarding/offboarding, and enforce access policies reliably across multiple systems. I am comfortable managing SSO, SCIM-based provisioning, and other enterprise software deployments, and I approach each project with a hands-on, solution-oriented mindset.

I enjoy collaborating closely with engineering and operations teams to ensure platforms are not only reliable but intuitive and effective for end users. My experience debugging complex system interactions, designing automation to prevent manual errors, and delivering scalable internal tools positions me to contribute effectively to HRT's Enterprise Engineering team.

What excites me most about Hudson River Trading is the culture of ownership, technical rigor, and high performance. I am motivated by environments where innovation and problem-solving go hand-in-hand with operational excellence, and I would welcome the opportunity to contribute to the infrastructure and systems that enable HRTers to move fast and work efficiently.

Thank you for your consideration. I would welcome the opportunity to discuss how my background aligns with this role.

Best Regards,

Jordan Scott
